ABDULALEEM ALTARSHA

Software Engineer · Full-Stack & Backend Development

Jeddah, Saudi Arabia · +90 543 156 5711 · abdulaleemtarshah@gmail.com

github.com/alim596 · alim596.github.io · LinkedIn

Brazilian citizen · Saudi residence permit held — no overseas visa process required. Remote-ready (GMT+3, flexible overlap).

Full-stack engineer with 1.5+ years shipping production software on a live, multi-state US insurance platform — event-driven Java services, NestJS/TypeScript microservices, and React front-ends. Architected a custom billing subsystem end-to-end when the vendor platform could not meet a contractual requirement; owns features from schema to UI.

TECHNICAL SKILLS

Languages: Java, TypeScript / JavaScript, Python, SQL, C++

Backend & Systems: NestJS / Node.js, Spring Boot, FastAPI, REST & GraphQL, event-driven architecture, message queues & workers, microservices, WebSockets, JWT / OAuth, Socotra policy platform (Java)

Frontend: React, Next.js, TypeScript, Redux, Tailwind CSS, responsive design

Data & Infrastructure: PostgreSQL, MongoDB, schema design, Docker, GitHub Actions CI/CD, Postman, Jira

AI Engineering: LangGraph multi-agent pipelines, wav2vec2 / CTC speech models, LLM API integration

EXPERIENCE

Radity — Software Engineer *Mar 2025 – Present · Zürich, Switzerland (Remote)*

Full-stack delivery for Bridger Insurance, a US auto carrier operating across multiple state-regulated programs, on an event-driven Java (Socotra) core extended by a NestJS/TypeScript microservice layer.

- Architected and shipped a custom billing subsystem end-to-end after the vendor platform could not satisfy a contractual client requirement — designed the NestJS microservices, queue workers, and third-party integrations, and drove it through product and QA validation, unblocking a launch-critical feature.
- Resolve high-impact production incidents in event-driven billing and policy workflows by tracing failures across distributed event handlers, microservices, and persisted state — fixing root causes rather than symptoms and reducing recurrence of operational defects.
- Deliver features across the full policy lifecycle — quoting, underwriting, endorsements, cancellations, reinstatements, and billing — through 200+ production changes, from React/TypeScript front-ends to backend microservices and webhook integrations.
- Authored Rater API test cases and led end-to-end testing for cancellation and reinstatement flows; independently surfaced and triaged 65+ defects with QA, product, and offshore engineering, protecting release quality on high-risk lifecycle transitions.
- Recognized by the CTO and engineering leads for cross-service debugging, ownership, and clear communication with QA, product, and distributed stakeholders.

Rafraf — Frontend Developer *Aug 2024 – Mar 2025 · Jeddah, Saudi Arabia*

- Led front-end development of the CRM platform running the company's day-to-day customer operations — React/Node.js interfaces over REST and GraphQL APIs, streamlining customer-management workflows for internal teams.
- Owned third-party integration work between the CRM and external services, implementing input validation and security hardening on customer-facing flows to reduce data-exposure risk.
- Translated ambiguous product requirements into shipped features, frequently acting as the bridge between stakeholders and engineering to accelerate decisions and reduce rework.

PROJECTS

Accentra — AI language-learning platform · senior capstone, team of 5

- CEFR-aligned listening, reading, and writing exams with phoneme-level pronunciation feedback. Next.js 15 / React / TypeScript front-end, FastAPI backend, PostgreSQL, Docker; multi-agent LangGraph pipelines for exam generation and wav2vec2 + CTC + GOP for pronunciation scoring, with JWT / Google OAuth and role-based access. Led infrastructure (Docker, GitHub Actions CI, Git workflow), the API client layer, and Instructor Mode end-to-end.

EDUCATION

Bilkent University — B.Sc. Computer Engineering *Sep 2022 – May 2026 · Ankara, Türkiye*

Coursework: Data Structures, Algorithms, Object-Oriented Programming (Java), Database Systems, Operating Systems, Software Engineering, Software Architecture Design.
