

ABDULEEM ALTARSHA

Software Engineer · Full-Stack Developer

Ankara, Türkiye · +90 543 156 5711 · abduleemtarshah@gmail.com ·
<https://www.linkedin.com/in/abduleem-altarsha-159469242/>

Software Engineer with hands-on full-stack experience delivering production features for complex, distributed insurance and CRM platforms. Day-to-day work spans Java-based services on the Socotra policy administration platform (event-driven flows, asynchronous integrations), NestJS / TypeScript back-ends, and React front-ends, integrated through REST APIs and event-driven messaging. Recognized by team leads for strong problem-solving, clear communication with QA, product, and offshore stakeholders, and a habit of debugging across services to fix root causes rather than patch symptoms.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, Python, C++, SQL, HTML, CSS

Backend & Architecture: Node.js / NestJS, FastAPI / Python, Spring Boot, microservices & distributed systems, REST APIs, GraphQL, JWT / OAuth, Socotra Insurance Platform (Java)

Frontend: React, Next.js, Redux, TypeScript, Tailwind CSS, responsive design

Databases & DevOps: PostgreSQL, MongoDB, schema design; Docker, GitHub Actions (CI/CD), Postman, Jira

EXPERIENCE

Radity — *Software Engineer, Mar 2025 – Present* · Zürich, Switzerland (Remote)

- Build and maintain full-stack features for Bridger Insurance, a US auto-insurance carrier operating across multiple state-regulated programs — working across a Java-based Socotra core (event-driven) and a NestJS / TypeScript microservice layer that extends the platform to meet client-specific business rules.
- Architected and shipped a custom billing solution end-to-end after the Socotra platform couldn't satisfy a key contractual client requirement — designed the NestJS microservices, queue workers, and integrations, and validated the system with product and QA, unblocking a feature the client could not have launched otherwise.
- Shipped 200+ production tickets across quoting, underwriting, endorsements, cancellations, reinstatements, and billing systems — sustaining release velocity on a multi-state US insurance platform under aggressive deployment timelines.
- Resolved high-impact production incidents in event-driven billing and policy workflows by tracing failures across distributed event handlers, NestJS microservices, and persisted system state — improving platform stability and reducing recurrence of operational defects.
- Independently surfaced and triaged 65+ production defects, partnering with QA, product, and offshore engineering teams on root-cause analysis — protecting release quality and preventing customer-facing regressions.
- Authored Rater API test cases and led end-to-end testing for cancellation and reinstatement flows; extended React/TypeScript front-ends and wired them into backend microservices and webhook integrations, hardening regression coverage on high-risk lifecycle transitions.

Rafraf — *Frontend Developer Aug 2024 – Mar 2025* · Jeddah, Saudi Arabia

- Led front-end development of a CRM platform serving the company's day-to-day customer operations — built React/Node.js interfaces backed by REST and GraphQL APIs, streamlining customer-management workflows and improving operational efficiency for internal teams.
- Owned complex third-party integration work between the CRM and external services — implemented input validation and security hardening on customer-facing flows to reduce data-exposure risk and downstream incidents.
- Translated ambiguous product requirements into shipped features by collaborating closely with backend and product teammates — often acting as the bridge between stakeholders and engineering to accelerate decisions and reduce rework.

PROJECTS

Accentra — *AI-powered language-learning platform CS 491 / 492 Senior Capstone* · team of 5

Web-based platform delivering CEFR-aligned exams (listening, reading, writing) and phoneme-level pronunciation feedback. Stack: Next.js 15 / React / TypeScript front-end, FastAPI / Python backend, PostgreSQL, Docker; multi-agent LangGraph pipelines for AI exam generation, wav2vec2 + CTC + GOP for pronunciation scoring, JWT / Google OAuth with role-based access. Led infrastructure (Docker, GitHub Actions CI, Git workflow), API client layer, and the full Instructor Mode end-to-end.

EDUCATION

Bilkent University — *B.Sc. Computer Engineering, Sep 2022 – May 2026* · Ankara, Türkiye

Coursework: Data Structures, Algorithms, Object-Oriented Programming (Java), Database Systems, Operating Systems, Software Engineering, Software Architecture Design.

CERTIFICATIONS & LANGUAGES

Certifications: Coursera — Programming Foundations with JS/HTML/CSS (with Honors); Python series (Databases, Web Data, Visualization); Introduction to Cybersecurity Tools & Cyber Attacks.

Languages: English (Native / Bilingual) · Arabic (Native / Bilingual) · Turkish (Conversational)
